

Cutting Table Barcode Solution Deluxe

This is the scanner part of the Cutting Table Barcode Solution Deluxe.

This scanner can be used as a Cutting Table Barcode Solution, as well as for taking inventory. The enclosed manual shows you how to use the scanner for taking inventory in your store.

To use it as a Cutting Table Barcode Solution, simply attach the cradle to the printer with the included cable and attached adapter and follow these instructions:

- 1)** From the scanner menu, choose “Cutting Table”, and select either “Paper” or “Labels” when prompted, depending on whether you will be using paper or labels in the printer. You will also be prompted to choose fractions, decimals, or whole numbers for quantity entry.
- 2)** Begin scanning fabric barcodes and entering quantities (for information about how to do this, please follow the included manual, as if you were taking inventory).
- 3)** When you are done scanning all of the customer’s fabric, press the * key on the scanner, and put it in the cradle when prompted.
- 4)** The printer will print all of the barcodes and quantities. When it has finished printing, you will be prompted to erase the data. As long as the printer printed everything correctly, you should select Yes. If you select “No”, then the data will remain in the scanner, and be added to any barcodes that you scan the next time.
- 5)** The scanner is now ready to start again. Store it in the cradle to keep it charged.
